ker

From 2021 to the Future

For Newker, 2021 is a very important year. We have inaugurated our new headquarters which has been fitted with a spectacular showroom, and modern office space. We continue to progress, leading the way into the future..

Do you want to join us?

Para Newker 2021 es un año muy importante. Hemos inaugurado nuestras nuevas instalaciones centrales, con una espectacular exposición y unas modernas oficinas. Seguimos evolucionando, marcando el camino hacia el futuro.

¿Nos acompañas?

Visit us.

We want to show you our new facilities to make you feel at home, we have prepared a Virtual Tour, available in our website:

Queremos enseñarte nuestras nuevas instalaciones, y para que te sientas como en casa, hemos preparado un Tour Virtual, disponible desde nuestra página web:

All the technical and commercial information of our products is updated in real time on our new website.

Toda la información técnica y comercial de nuestros productos actualizada a tiempo real en nuestra nueva web

- **New design:** We have updated our website to make it more visually attractive and to improve its use.
- **New smart filters:** Finding a product into our website is easier than ever thanks to a new searching engine with multiple filters.
- **Packing updated in real time:** any change made to our products is immediately reflected on the web.
- **Images in HD:** Our customers have all the images on the web to download in High Resolution.
- **Inspiration:** a wide range of images to see our products in real environments

- **Nuevo diseño:** Hemos actualizado nuestra web para hacerla más atractiva visualmente y mejorar la facilidad de uso.
- **Nuevas filtros inteligentes:** Encontrar un producto en nuestra web es más fácil que nunca gracias a un nuevo buscador con múltiples filtros.
- **Packing actualizado a tiempo real:** cualquier cambio que se realice en nuestros productos es reflejado inmediatamente en la web.
- **Imágenes en HD:** Nuestros clientes disponen de todas las imágenes de la web para descargar en Alta Resolución.
- **Inspiración:** Multitud de imágenes para ver nuestros productos en ambientes reales

NEWKER APP

We present our new app
with new features

Presentamos nuestra nueva app
con nuevas funcionalidades

- **App available for all devices:** phone and tablets, both on iOS and Android platforms.

- **New features:** smart searching engine, favorite list, catalogs and technical information downloads ...

- **Capture of products in our exhibition:** you can select the chosen products to create lists, request budgets and get in contact with the commercial manager.

- **Quick download:** Simple and fast download and registration process.

- **App disponible para todos los dispositivos:** teléfono y tablets, tanto en plataforma iOS como Android.

- **Nuevas funcionalidades:** buscador inteligente, listas de favoritos, descarga de catálogos e información técnica....

- **Capturador de productos en nuestra exposición:** puedes seleccionar los productos elegidos para crear listas, pedir presupuestos y mantener el contacto con el responsable comercial.

- **Descarga rápida:** Proceso de descarga y registro sencillo y rápido.

Mix & Match LOUNGE & CHROMA

Mix & Match, a new trendy philosophy for our 2021 collections.

Mix & Match
NEWKERCONCEPT2021

Mix & Match es una nueva filosofía que sigue las últimas tendencias, para nuestras colecciones de 2021

Newker proposes a new concept of decoration. We introduce key pieces that invites you to mix our new collectionts and obtain a new dimension for the spaces.

Newker propone un nuevo concepto de decoración: Introducimos piezas clave que invitan a mezclar nuestras nuevas colecciones, obteniendo una nueva dimensión para los espacios.

* It is required to verify size and caliber of tiles before placing them, mainly when combining models
* Es necesario comprobar tamaño y calibres de las piezas antes de la colocación, sobretodo al combinar modelos.

* Debido a la especial textura de esta serie, para su colocación, recomendamos usar la menor cantidad posible de material de rejuntado, evitando esparcirlo sobre la pieza. El material de rejuntado debe ser limpiado de la superficie del azulejo antes de su secado, con una esponja no abrasiva, jabón neutro y agua.

* Due to the special texture of this range, for installation, we recommend using the smallest possible amount of grout material, avoiding over grouting the piece, just the joint. The grout must be cleaned off the surface of the tile before it has dried, with a non-abrasive sponge, mild soap and water.

TECHNICAL SOLUTIONS

SOLUCIONES TÉCNICAS

Technical Solutions Soluciones Técnicas

At Newker we are ready to provide solutions for all your projects:
Ventilated façades, technical floors, steps, skirting boards ...

Do you need any help?

En Newker estamos preparados para dar soluciones a todos tus proyectos:
Fachadas Ventiladas, Suelos Técnicos, Peldaños, Rodapiés...

¿Te ayudamos?

20mm

PAVIMENTO ELEVADO DE ALTO TRANSITO Y APLICACIONES EXTERIORES

PROYECTOS FACHADAS VENTILADAS

SISTEMAS DE FACHADA VENTILADA

Sistema EVO PORCELÁNICO

Sistema de perfilado en aluminio para colocación de revestimientos de cerámica de espesor reducido en fachadas ventiladas.

200 mm altura máxima | 30 mm espesor máximo | 15 mm de espesor

PERFILADO VERTICAL

Sistema EVO perfilado en un sistema de perfilado vertical.

EXIGENCIAS CUMPLIDAS

Capacidad de carga superior al estándar para aplicaciones exteriores.

MATERIAL

Perfiles de aluminio anodizado y cerámica de alta resistencia.

FÁCIL INSTALACIÓN

Perfiles instalados sobre sistema de perfilado vertical.

EQUILIBRIO

Con perfiles de aluminio, superior y inferior, se logra el equilibrio.

PARTES DEL SISTEMA:

- Perfiles de aluminio superior e inferior
- Cerámica
- Perfiles de aluminio de fijación
- Perfiles de aluminio de perfilado vertical
- Perfiles de aluminio de perfilado horizontal
- Perfiles de aluminio de perfilado diagonal
- Perfiles de aluminio de perfilado curvo

TILE-LAYING RECOMMENDATIONS

CONSEJOS DE COLOCACIÓN

TILE-LAYING RECOMMENDATIONS

The correct installation and commissioning of a system of ceramic cladding is a process that involves all the professionals and processes involved in the project. In all cases it is necessary to read the manufacturers' recommendations, as well as the technical specifications of all the products and materials used.

These recommendations are based on the UNE 138002 Standard and are valid exclusively within the scope of application set forth therein. In any other case, refer to the prevailing regulations of each country.

In this section, we have compiled a brief summary of our tips. We recommend downloading the complete guide from our web site:

<https://www.newker.com/en/downloads>

Placement joints.

This refers to the physical separation between adjoining tiles which serves technical/aesthetic functions in the ceramic system and is essential to its final quality and durability.

Under no circumstances should ceramic cladding or flooring be installed without joints.

A minimal joint measuring between 1,5 mm and 3 mm wide should be used in interior cladding and flooring, on stable backing surfaces and in flooring without radiant heating or other mechanical demands.

General requirements for fitting using adhesives.

- The layer of fixing material must be applied on the flat surface in a regular manner with a uniform thickness and flatness.
- The appropriate trowel must be selected according to the type of installation, the tile dimensions and the type of adhesive being used. In general, we will use trowels with teeth measuring between 8 and 10 mm.
- For unstable backing surfaces and large tile formats, we will select S1 or S2-type deformable adhesives.
- The adhesive must be protected from drying too quickly and from the presence of humidity.
- Tiles with a low water absorption capacity should not be allowed to get wet.
- The application must be carried out when the room temperature and that of the backing surface and the materials is between +5°C and +30°C, without strong winds or rain in the case of outdoor fittings.

Fitting the tiles.

- Please check the size, caliber, tone, colour, quality of the pieces before the installation and if there is enough product to finish the work. No claims will be accepted once material has been installed.
- As general rule, tiles must be installed in the same position. This position is indicated with a sign in the back side of each tile (arrow or similar).
- Tiles should be placed with straight and regular joints between them.
- For large and rectangular formats, fitting against obstacles should be performed at a distance of 20% of the size of the piece or less and with an open joint of at least 3 mm.
- Within the adjustment time, it is recommended to lift one of the tiles to check if the required contact area is being achieved.
- The excess adhesive must be removed from the joints before it hardens to produce proper grouting.
- Protect the recently-installed ceramics from severe weather, frost and premature drying, as well as from any possible damages that subsequent works may cause.

** We do not recommend its use in rectified white body wall tiles. They can be chipped when the wedges are removed, as these products do not have the strength of the porcelain tiles at the edges.*

Grouting

This must be carried out with materials developed specifically for this purpose, defined and classified in standard UNE EN 13888.

- Grouting should be carried out at least 24 hours after fitting. The pointing material should be applied in accordance with the manufacturer's
- In general, we will use a CG2-type pointing material.
- For cases in which a high mechanical resistance, sealing and chemical resistance are required, we will use RG1-type pointing material.
- The grout is to be spread using a suitable rubber trowel, filling the entire depth of the joints with diagonal movements.

Final cleaning

To give the ceramic cladding a proper finish, a proper final clean must be carried out. This way, any remnants of cement, joint-sealing materials and other residue will be removed. To do this, we recommended the following steps:

- Clean the installed ceramic cladding well, removing dirt and remnants of material, dust, etc.
- Apply water to the surface, wipe it and leave to dry.
- Apply the descaling agent (such as diluted DETERDEK by FILA, according to the manufacturer's indications), leave it to work for a few minutes and wash the surface well.
- Finish the cleaning process by rinsing with abundant clean water.

If, after carrying out the process and once the material has dried, there are still remnants of adhesive, the process can be repeated again to remove it. Care must be taken when applying the descaling agent to prevent it from being left on the joint, since if it is applied to the joint it can attack it and alter it.

CONSEJOS DE COLOCACIÓN

La correcta instalación y puesta en obra de un sistema de revestimiento cerámico es un proceso que abarca todos los profesionales y procesos intervinientes en el proyecto. En todos los casos es necesario leer las recomendaciones de los fabricantes, las fichas técnicas de todos los productos y de los materiales utilizados.

Estas recomendaciones se basan en la norma UNE 138002 y son válidas exclusivamente en el ámbito de aplicación señalado por la misma. En cualquier otro caso, consulte con la normativa vigente de cada país.

En esta sección recopilamos un pequeño resumen de nuestros consejos, recomendamos descargar la guía completa a través de nuestra web:

Juntas de colocación.

Es la separación física entre baldosas contiguas que cumplen funciones técnicas/estéticas en el sistema y son esenciales para la calidad final y durabilidad del sistema cerámico.

No se debe colocar en ningún caso un revestimiento o pavimento cerámico sin junta o "a testa".

Se debe utilizar junta mínima entre 1,5 mm y 3 mm de anchura, en revestimientos y pavimentos en interiores, sobre soportes estables y en pavimentos sin calefacción radiante u otras exigencias mecánicas.

Requisitos Generales para la colocación con adhesivos.

- La capa del material de agarre se debe aplicar sobre la superficie plana de forma regular con un espesor y planitud uniformes.
- Se debe seleccionar la llana adecuada según el tipo de instalación, dimensiones de la baldosa y tipo de adhesivo a emplear. Generalmente utilizaremos llanas entre 8 y 10 mm de diente.
- Para soportes con inestabilidad y formatos de baldosa grandes, seleccionaremos adhesivos deformables tipo S1 o S2.
- El adhesivo debe ser protegido de un secado rápido y de presencia de humedad.
- Las baldosas con baja capacidad de absorción de agua no se deben humectar con agua.
- La aplicación se debe realizar cuando la temperatura ambiente, del soporte y la de los materiales se encuentran entre +5 °C y + 30 °C, sin vientos fuertes y sin lluvia en colocación de exterior.

Colocación de las baldosas.

- Comprobar el formato, calibre, tono, color y calidad de las piezas antes de empezar la colocación. Comprobar que se dispone de producto suficiente para completar la obra. No se admitirán reclamaciones de material instalado.
- Como norma general, se deben de colocar todas las piezas en la misma posición. Esta posición se indica en la parte trasera de las piezas con un símbolo (flecha o similar)
- Las baldosas deben colocarse con juntas rectas y regulares entre sí.
- Para formatos grandes y rectangulares, la colocación a traba se realizará a una distancia del 20% de pieza o inferior y con junta abierta a partir de 3 mm.
- Dentro del tiempo de ajuste se recomienda levantar alguna baldosa para comprobar si se está consiguiendo la superficie de contacto requerida.
- Se debe eliminar el adhesivo sobrante de las juntas antes de que endurezca para un correcto rejuntado.
- Proteger el acabado cerámico recién instalado, de las inclemencias del tiempo, heladas y secado prematuro, y de posibles daños que puedan causar los trabajos posteriores.

**No recomendamos el uso de sistemas de nivelación en revestimientos de pasta blanca rectificadas. Pueden producirse desconchados al retirarlas cuñas, pues estos productos no tienen la resistencia de los porcelánicos en los bordes.*

Rejuntado

Se debe realizar con materiales desarrollados específicamente para esta finalidad definidos y clasificados en la norma UNE EN 13888.

- El rejuntado se realizará transcurridas al menos 24 horas desde la colocación.
- La aplicación del material de rejuntado se realizará según las instrucciones del fabricante.
- Generalmente utilizaremos un material de rejuntado tipo CG2.
- Para casos en los que se requiera alta resistencia mecánica, estanqueidad y resistencia química utilizaremos un material tipo RG1
- Se extenderá la pasta de rejuntado utilizando una llana de goma adecuada rellenando las juntas en todas su profundidad con movimientos diagonales.

Limpieza final

Para un correcto acabado del revestimiento cerámico, es necesario proceder a una correcta limpieza final de la obra. De este modo se retirarán los restos de cemento, materiales de sellado de juntas y cualquier otro residuo. Para ello, se recomiendan los siguientes pasos:

- Limpiar bien el revestimiento cerámico instalado, eliminando suciedad y restos de material, polvo, etc.
- Aplicar agua sobre la superficie, recoger y dejar secar.
- Aplicar el desincrustante (tipo DETERDEK de FILA diluido según las indicaciones del fabricante), dejar que surta efecto durante unos minutos y fregar bien la superficie.
- Finalizar la limpieza con un abundante aclarado de agua limpia.

Si tras realizar el proceso, y una vez seco el material, siguen quedando restos de adhesivo, puede repetirse el proceso de nuevo, para su eliminación. Se debe tener precaución a la hora de aplicar el desincrustante y evitar que quede sobre la junta, ya que, si es aplicado sobre la misma, puede atacarla y alterarla.

CONSEILS DE MISE EN ŒUVRE

L'installation et la mise en œuvre correctes d'un système de revêtement en céramique est un processus qui fait appel à tous les professionnels et processus impliqués dans le projet. Dans tous les cas, il est nécessaire de lire les recommandations des fabricants, les fiches techniques de tous les produits et des matériaux utilisés.

Ces recommandations sont basées sur la norme UNE 138002 et sont valables exclusivement dans le domaine d'application qu'elle indique. Dans les autres cas, vérifiez la réglementation en vigueur dans chaque pays.

Dans cet onglet, nous présentons un résumé de nos conseils, nous vous recommandons de télécharger le guide complet sur notre site:

Joint de placement.

C'est la séparation physique entre les carreaux contigus qui remplit des fonctions techniques/esthétiques dans le système et est essentielle pour la qualité finale et la durabilité du système en céramique.

En aucun cas, un revêtement ou sol en céramique ne doit être posé sans joint ou « a testa ».

Un joint minimum de 1,5 à 3 mm de large doit être utilisé pour les revêtements et les sols à l'intérieur, sur des supports stables et sur des sols sans chauffage par rayonnement ou autres exigences mécaniques.

Exigences générales pour la pose avec des adhésifs.

- La couche de matériau d'adhérence doit être appliquée sur la surface plane de manière régulière avec une épaisseur et une planéité uniformes.
- La truelle appropriée doit être choisie en fonction du type d'installation, des dimensions du carreau et du type d'adhésif à utiliser. Généralement, nous utiliserons des truelles de 8 à 10 mm à dents.
- Pour les supports instables et les formats de carreaux larges, nous choisirons des adhésifs déformables de type S1 ou S2.
- L'adhésif doit être protégé contre le séchage rapide et la présence d'humidité.
- Les carreaux à faible capacité d'absorption d'eau ne doivent pas être mouillés avec de l'eau.
- L'application doit être faite lorsque la température ambiante, du support et des matériaux est comprise entre +5 °C et +30°C, sans vents forts et sans pluie dans les installations en extérieur.

Pose des carreaux.

- Vérifier le format, le calibre, le ton, la couleur et la qualité des pièces avant de commencer le placement. Vérifier que le produit disponible est suffisant pour compléter le chantier. Les réclamations concernant le matériel installé ne sont pas recevables.
- En règle générale, toutes les pièces doivent être placées dans la même position. Cette position est indiquée à l'arrière des pièces avec un symbole (flèche ou similaire)
- Les carreaux doivent être posés avec des joints droits et réguliers.
- Pour les formats grands et rectangulaires, la pose en décalé doit être réalisée à une distance égale ou inférieure à 20 % de la pièce et avec un joint ouvert de 3 mm.
- Pendant le temps d'ajustement, il est recommandé de soulever un carreau pour vérifier si la surface de contact requise est obtenue.
- L'excès d'adhésif doit être retiré des joints avant qu'il ne durcisse pour assurer un jointoiment correct.
- Protégez l'installation en céramique nouvellement réalisée contre les intempéries, le gel et le séchage prématuré, ainsi que contre les dommages que pourraient entraîner des travaux ultérieurs.

**Non recommandé pour la mise en œuvre de faïences rectifiées en pâtes blanches (grès émaillés). Des éclats d'émail pourraient se produire lors du dégageage des cales, la bordure de ces produits présentant une fragilité supérieure à celle des grès cérames émaillés.*

Jointoiment.

Il doit être réalisé avec des matériaux développés spécifiquement à cet effet, définis et classés dans la norme UNE EN 13888.

- Le jointoiment aura lieu au moins 24 heures après la pose.
- L'application du matériau de jointoiment sera effectuée conformément aux instructions du fabricant.
- En règle générale, nous utiliserons un matériau de jointoiment de type CG2. Pour les cas dans lesquels une résistance mécanique, une étanchéité et une résistance chimique élevées sont requises, nous utiliserons un matériau de jointoiment de type RG1.
- Le mortier de jointoiment sera étalé à l'aide d'une truelle en caoutchouc appropriée pour remplir les joints dans toute leur profondeur par des mouvements diagonaux.

Nettoyage final.

Pour une finition correcte du revêtement céramique, il est nécessaire de procéder à un nettoyage final approprié du chantier. De cette manière, les résidus de ciment, de matériaux d'étanchéité des joints et autres seront éliminés. Pour cela, il est recommandé de suivre les étapes suivantes :

- Nettoyez soigneusement les carreaux de céramique installés, en éliminant la saleté, les débris, la poussière, etc.
- Appliquez de l'eau sur la surface, retirez-la et laissez sécher.
- Appliquez le désincrustant (de type DETERDEK de FILA dilué selon les instructions du fabricant), laissez agir pendant quelques minutes et frottez soigneusement la surface.
- Terminez le nettoyage en rinçant abondamment à l'eau claire.

Si, après la réalisation du processus et une fois le matériau sec, des restes d'adhésif subsistent, le processus peut être répété pour leur élimination. Il faut faire preuve de prudence lors de l'application du désincrustant et éviter qu'il ne reste sur le joint, car s'il est appliqué dessus, il peut l'attaquer et l'altérer.
